Exam 2

Number Theory

30-04-2013

Solutions must be complete in order to receive full credit.

1. Find a reduced residue system (RRS) modulo 15, using only prime numbers.
2. Evaluate $\phi(36000)$.
3. Compute $2^{34567} \% 35$ with the help of Euler's theorem.
4. Find all the primitive roots modulo 10.
5. How many primitive roots exist modulo 54?
6. Solve the discrete logarithm problem $6^{2x} \equiv 9 \pmod{11}$ using the primitive root $g = 2$.

-Amin Witno

The list of primes below 200.

2	3	5	7	11	13	17	19	23	29
31	37	41	43	47	53	59	61	67	71
